

GREENGRID™ ULTRA EXTENSIVE GREEN ROOF

The 2-inch Extensive GreenGrid™ System is an extremely lightweight green roofing system of modules, composed of 2 inches of soil media and drought-tolerant vegetation. The vegetation is comprised of colorful sedums requiring little or no irrigation, fertilization, or maintenance. This 2-inch green roofing system is an extremely economical choice for green roofing. The approximate weight of a fully saturated 2-inch GreenGrid™ extensive roof system is **10 pounds per square foot**, which is similar to the weight of gravel ballast placed on many conventional roofs.

The following are just a few suggested plant species (USDA Hardiness Zones 3-8) for use in the 2-inch GreenGrid™ Extensive Module:

Species	Mature Height (in)	Mature Width (in)	Flower Color	Months in Bloom
<i>Sedum acre</i>	2-3	12-18	Yellow	June
<i>Sedum album</i>	3-6	12-18	White	June
<i>Sedum album 'Coral Carpet'</i>	2-3	12-18	White	June
<i>Sedum kamtschaticum</i>	6-8	12-18	Yellow	MJJA
<i>Sedum sexangulare</i>	2-3	12-18	Yellow	June
<i>Sedum spurium 'Bailey's Gold'</i>	3-6	12-18	Yellow	MJJA
<i>Sedum spurium 'Dragon's Blood'</i>	3-6	12-18	Red	MJJA
