BOISE AREA OF IMPACT SURVEY

Introduction

The Boise Area of Impact Survey was conducted to identify the historic resources which will be impacted by urban expansion into rural agricultural areas immediately beyond the Boise City limits. Ada County and Boise City jointly sponsored this study to determine the extent of the resources and need for their future documentation and protection. As designated Certified Local Governments, Ada County and Boise City received partial funding for this study from the Idaho State Historic Preservation Office.

This study involved surveying three areas around Boise as determined by the Ada County and Boise City Planning staffs as being impacted by urban growth. Resources were documented using black and white photos. Site forms were completed, and an analysis of the history of the land use coupled with urban growth impacts was conducted. Each site was ranked according to the pressure or threats that urban expansion created.

Methodology

The methodology that was used to ascertain which resources were to be surveyed and the ranking of the resources involved the following elements.

1. Survey resources within the three target areas. Criteria depended upon estimated age of the resource being 50 years old or older, and the degree of integrity which the resource displayed. Given the rural location of the majority of the sites, many properties contained a residence and outbuildings. If the integrity of the residence was compromised due to alterations, yet the outbuildings displayed few changes, the resource was surveyed. Black and white photos were taken of the site, often more than one if the site had numerous buildings and/or a landscape that added integrity to the resource. Survey forms were completed for the required information.

2. Using zoning maps of each area and observing the landscape during the survey, four rankings were established to define the impact of urban expansion on each resource. The four rankings are as follows:

A. Under Pressure: A ranking whereby the zoning designation of each property and its surrounding properties pressures the resource. The predominant zoning designations are:

1. AP-2 - agricultural preservation until the extension of urban services, water and sewer, allows for urban development.
2. R1, R3, or R8 - residential development of one, one to three, or three to eight units per acre.
3. C-1 or C-2 - neighborhood commercial or highway commercial development.

No AP-1 zoning designation was found; agricultural land not intended for future urban expansion. Consequently the vast majority of the sites are in jeopardy of future residential or commercial development.
B. **Potential Threat:** A ranking whereby a variety of impacts potentially threaten the resource.

1. Widening of two lane roads to three or five lanes due to increased traffic volume.
2. A residential resource zoned commercial would be threatened with possible demolition.
3. An archaeological site threatened with increased destruction of evidence by over use of the area due to urban expansion.

C. **Under Pressure with Potential Threat:** A ranking whereby zoning pressure coupled with threats to the resource create a more complex impact on the resource.

D. **No Pressure:** This ranking indicated that the resource is important to the target area, but is buffered by other properties and no potential threats are evident. These resources are located within the Ustick Road survey area and are important resources for a possible historic district.

Intrinsically, there are other factors that follow urban expansion into a rural agricultural area that impact an historic resource. Factors that one should be aware of, but were not used as strict impacts on a site could include noise, air, and water pollution. The increased traffic volume associated with urban growth changes a serene agricultural area to a noisy, more polluted environment. The historic feeling of an agricultural landscape is thus affected. Also as land uses change, so does the associative vegetation. The destruction of a windbreak of trees impacts the historic character of the agricultural setting. Consequently, some potential threats to a resource entail a chain reaction of interrelated impacts upon an area.

3. Historic use of the land in each survey area. Research was conducted to ascertain the change in the land uses of each survey area. An analysis of the present and potential land uses was studied to create an historic overview of each area. Research of individual properties was not conducted, as it is beyond the scope of this project. Those properties that exhibit potential historic importance are prioritized for further study.

4. Maps delineating the location and ranking of each inventoried property are provided. Each ranking is coded to the property inventoried.

**West State Street Area History**

The West State Street survey area includes Sections 13 and 24, T.4N., R.1E. Major roads that penetrate the survey area are West State Street and Hill Road which run east-west. North-south roads are Bogart Lane, Gary Lane and Glenwood Street. Local streets subdivide these sections. The Boise River borders the southern part of this study area.

Historical information for this area is mainly based on a series of maps depicting the development of roads, irrigation canals, and land ownership. Maps tracing the route of emigrants through the Boise Valley indicate two branches of the Oregon Trail were the predecessors of Hill Road and West State Street. Evidence of these early trails have vanished with road improvements and land usage. An 1897 United States Geological Survey map depicts unnamed roads that follow present day West State Street, Hill Road, and Bogart Lane. The Farmers Canal, which parallels Hill Road, winds
through this area and ends just west of Section 13. The earliest known work on the Farmers Union Canal began in 1865. By 1895, six miles extended from the Boise River east of the city, crossed north of the city, and irrigated farmland to the northwest of Boise. By 1899 the canal was twenty-four miles long extending beyond the community of Star. This canal was also called the Farmers Union Ditch and the Farmers Canal.  

The Dry Creek Ditch, later Dry Creek Canal, was established in 1879. It begins in Section 24 at the Boise River. By 1900 it extended 13 miles westward. Another smaller canal began at the Boise River west of the city, paralleled West State Street on the north and terminated west of Section 24 in 1897. This was identified on later maps as the Valley Canal. Annie Laurie Bird states in her book Boise, the Peace Valley, "Thus, in 1895, the larger ditches on the north side were in operation, agriculture was carried on extensively, and homes had become permanent."  

A map depicting agriculture land in Ada County, c. 1905, indicates the Farmers Union Canal extended westward and joined Dry Creek north of Eagle. West State Street is called Valley Road on this map. The Valley Ditch nor the Dry Creek Ditch are shown on this map. Practically all the land has been subdivided and landowners names are shown within Sections 13 and 24.  

A 1920 map shows the electric street car line paralleling West State Street linking Boise with Eagle and Star. By 1938, the Metzker’s Atlas of Ada County indicates Sections 13 and 24 were further subdivided with roads. Though unnamed, they coincide with present day Gary Lane, Sloan Street, Caswell Street, Roe Street, and Strawberry Glenn Road. A bridge at Strawberry Glenn Road linked the survey area with Strawberry Glenn on the south side of Boise River. This map also shows land ownership.  

A 1950 General Highway Map for Ada County indicates an airfield along the Boise River west of Strawberry Glenn Road. The landing field is still present on the 1975 and 1980 aerial photos of Ada county. These aerial photos indicate increased subdivision of agricultural land for residential, commercial and mobile home courts. The Strawberry Glenn Bridge was removed before the 1980 aerial photo was taken. The 1985 aerial photo indicates the airfield off Strawberry Glenn Road has been replaced with residential development. Commercial development has progressed at the Gary Lane - West State Street - Glenwood Road intersection. Current zoning maps for this area show that no agricultural land is to be preserved for future agricultural purposes. Present agricultural land is zoned for urban expansion when urban services, water and sewer systems, become available. Predominantly, the area is zoned residential with some commercial areas along West State Street and Glenwood Road.  

West State Street Survey Results

Twenty-seven resources were surveyed in the West State Street area. Nine sites are agricultural resources with residences, barns and/or outbuildings. Seventeen sites are residences, some with garages or other outbuildings. One site is a large barn from a farmstead which has been subdivided. The ranking of resources in the West State Street area includes thirteen under pressure and fourteen under pressure with potential threats of additional impacts on the resource.  

Analysis of this area indicates through the zoning designations that the Glenwood - West State Street-Gary Lane intersection will continue to become developed for commercial endeavors. Commercial development will probably proceed westward along State Street and south along Glenwood to the Boise River. Present agricultural land will eventually be divided into smaller parcels for residential
use. As development increases, Gary Lane, Hill Road and Bogart Lane are potential candidates for widening to accommodate greater traffic volume.

**Ustick Road Survey Area History**

The Ustick Road survey area includes Section 34, T.4N., R.1E., and Section 3, T.3N., R.1E. Major roads which define the area on the east and west are North Five Mile Road and North Cloverdale Road. McMillan Road is the north boundary and Fairview borders the south. Ustick Road divides the two sections. Other local roads penetrate the two sections.

The 1897 U.S.G.S. map indicates a road located along the present McMillan Road and a road near North Cloverdale. A third road cuts Section 3 diagonally, but does not coincide with any present road. The Settler's Canal is depicted winding southerly through both sections. The Settlers Ditch (later Canal and also known as the Lemp Canal) began in 1884, with little progress made over the next six years. Completion was in 1891 with lateral ditches extended in 1892.

The c. 1905 Agricultural Lands in Ada County map depicts the Settler's Canal with a lateral slough extending east and west through Section 3. All the land in these two sections has been claimed with landowner's names labeled. H. P. Ustick is the owner of the western half of the northeast quarter of Section 3. The impetus for development of this area by Dr. Harlan Page Ustick was the locating of the Boise Valley Line, a railroad line, six miles south of Ustick by 1907. Headlines in the Idaho Daily Statesman proclaimed "Stores, Buildings, and Residences to go up soon and Baptist Church and Union School Contemplated - Boise Valley Line Being Built to Nampa." On April 12, 1907 land in the Ustick community was platted into 110 lots with a store and bank planned for the corners of Market (Mumbarto Avenue) and Main Streets (Ustick Road). Articles of incorporation were filed for the bank on July 30, 1907. This community center was surrounded by irrigated farmland. A second force that further established the community was the Interurban Street Car Company's lines that linked Boise and Nampa. The electric lines which ran along Ustick Road were completed in December 1910. Along with the bank, store, and residences, the community boasted an interurban depot, fruit packing plant, post office, churches, and school. The community survived until automobiles replaced the streetcar line in 1928 and its link to other small towns was severed. The 1920 Intermountain Map of Ada County shows the streetcar line, but it is gone on the 1938 Metzker's Map. Also by 1938 the major defining roads of the two sections are developed.

The 1950 General Highway Map for Ada County indicates Ustick as having a population of 100. Section 34, north of Ustick Road was not penetrated by any streets and development was still located only along McMillan, North Cloverdale, North Five Mile, and Ustick Roads. By 1975, the aerial photos show subdivisions in the north half of this section with the beginnings of a subdivision off of Ustick. The 1980 and 1985 aerial photos of Section 34 show the rapid development, including a school, two churches, and commercial activity at the northwest corner of Ustick and North Five Mile Roads. The 1990 aerial photo shows very few small isolated tracts of agricultural land. Section 3, south of Ustick Road has endured the same rapid development between 1975-90. These aerial photos indicate more growth along Fairview, North Five Mile, Ustick and North Cloverdale Roads. The central part of the section has maintained some large agricultural spaces. Current zoning maps indicate no agricultural spaces are to be preserved for the future. Commercial zoning is occurring along Ustick and North Fairview Roads. Those open spaces that have not been developed for residential use are zoned as such for the future.
Ustick Road Survey Results

Twenty-eight resources were surveyed in the Ustick Road area. Seven sites are agricultural resources with residences, barns and/or outbuildings, nineteen sites are residences, some with garages or other outbuildings, and two are commercial resources. The ranking of resources in the Ustick Road survey area includes: ten under pressure, fourteen under pressure with potential threats, and one potentially threatened only. Three resources are under no pressure but are important historic resources to the Ustick area. These three sites are located in the original Ustick community.

Analysis of this area indicates through the zoning designations that Fairview Avenue and Ustick Road will become more commercially oriented. Subdevelopment of present agricultural land for residential parcels will continue to occur. North Cloverdale, North Five Mile, McMillan and Ustick Roads will be widened to accommodate greater traffic volume. This puts the historic resources along Ustick in jeopardy. Widening of Ustick Road to three lanes will harm these resources, but if five lanes occurs, many of the resources will have the road at their doorsteps.

East Boise Survey Area History

The East Boise Survey area includes Sections 18, 19, 29, 30, 31, 32, and 33 of T.3N., R.3E. Major roads that penetrate this area are Highway 21, Boise Avenue, Amity Road, Holcomb Road and Eckert Road. The Boise River flows from the southeast to northwest through this area.

Maps tracing the route of emigrants through this area indicate that the Oregon Trail followed the bench south of the Boise River through Sections 33 and 32 and dropped into the river valley in Section 31. A second route of the Oregon Trail dropped into the river valley farther to the southeast and its route coincides with Boise Avenue. Most of these two trail sections have been obliterated by development, however, some evidence of the trail still continues from the southeast along the bench into Sections 33 and 32 of this survey area. 13

On the 1897 U.S.G.S. map, a road, presumably Boise Avenue, follows the lower Oregon Trail route through survey sections 33, 32, 29 and 30. Also shown on this map is Highway 21 on the north side of the river. This map also indicates the beginning of the Nampa Land Improvement Company Canal in Section 29. This canal, begun in 1865, went through a series of developers until 1878 when William Ridenbaugh took over the project. The canal extended to Five Mile Creek by this time. During the next decade it had advanced a few miles further to Ten Mile Creek. By 1891 it had progressed beyond the Nampa area to Deer Flat Reservoir. In 1894, 1,500 people were served by the Ridenbaugh Canal. The canal was an important element in the establishment of the community of Nampa. 14

The c. 1905 Agricultural Lands in Ada County Map indicates that the Table Rock area was owned by The Jellison Brothers Stone Company. The Barber Lumber Company owned many tracts of land in Sections 28, 29, 32 and 33 along both sides of the Boise River. Many other tracts of land were claimed within the survey area as well. The New York Canal is shown on this map, though not on the earlier 1897 U.S.G.S. map. Conceived in 1882 by A.D. Foote as The Idaho Mining and Irrigation Company, the New York Canal was begun in 1890 and by 1891 extended six miles westward. The United States Reclamation Service completed the project in 1909. The 55 mile canal extends to Deer Flat Reservoir serving 167,000 acres of land by feeding many smaller canals throughout the Boise Valley. 15
The Barber Lumber company began erecting a dam, lumber mill, power plant, and company town five miles east of Boise in 1904. The business merged with the Payette Lumber Company in 1914. The mill and company town operated until 1934. Only the powerhouse, dam and a few other remnants of the operation remain. The company town of Barber, (also known as Barberton and Barber Flats), was located across Highway 21 where a mobile home park now exists. The town had a boarding house, dance hall, and 104 dwellings. The town was abandoned after the mill closed during the Depression. The dam and mill site has had considerable documentation and has been listed on the National Register of Historic Places.

The 1920 Intermountain Map of Ada County indicates that Barber was served by the Interurban Street Car Company Lines which extended eastward along the river. The town of Barber is still shown on the 1938 Metzker’s Map. By this time, Eckert Road connects both sides of the river. For the first time the Penitentiary Canal is shown irrigating the north side of the river. The quarry at Table Rock is also designated. The 1950 Ada County Highway Map still shows the town of Barber. This map defines Amity Road connecting Eckert Road and Boise Avenue.

All the historic resources for this survey area were found in Sections 18, 19, 29, and 30 except for the Oregon Trail which crosses Sections 31 and 23. Section 19, south of Table Rock, has shown considerable development since 1950. The 1975 aerial photo indicates a residential subdivision being carved on this bench below Table Rock. This residential area has crept up the hillside over the past 20 years and is encroaching upon two Native American archaeological sites found around Table Rock. Open spaces in Section 18 and 19 around Table Rock are zoned AP-2 encouraging additional urban expansion.

Other developments have occurred in Section 30 and 31 along Boise Avenue and the bench south of the river. A considerable number of residential subdivisions have been established in these areas. Further encroachment upon traces of the Oregon Trail may occur to the east in Sections 32, and 33. The majority of Sections 29, 32 and 33 are zoned AP-2, thus urban expansion will be occurring in these areas.

**East Boise Survey Results**

Twelve resources were surveyed in this East Boise Area. Five sites are under pressure, four sites are under pressure with potential threats, and one site is potentially threatened. Two linear resources, the Ridenbaugh and New York Canals are under no pressure nor are they potentially threatened.

Analysis of the area indicates that urban expansion is the probable future in the majority of the survey area. Particular concern is the Table Rock area where archaeological evidence is located. The majority of the resources in this area are well buffered from the impact of potential road widening.

**Conclusions and Recommendations**

Sixty-seven resources were inventoried in the Boise Area of Impact Survey. The resource types include: one church (formerly a residence), two commercial buildings (one formerly a residence), three engineering structures, four archaeological sites, twenty farmsteads, and thirty-seven residences (one formerly a commercial building and one formerly a school). Nine of these properties were inventoried in the "Ada County Farmstead Survey," three were inventoried in the "Ada County Historic Resources: A Reconnaissance Survey," and one was inventoried in "A Study of Irrigation and the Development of Ada County." Three of the archaeological sites were also previously surveyed. Three of the resources are already listed on the National Register of Historic Places.
surveyed. Three of the resources are already listed on the National Register of Historic Places: the Ustick School, the Barber Dam and Lumber Mill, and the Oregon Trail. Consequently, about a third of the resources surveyed in this project have been studied to some degree before. However, the level of this survey and previous surveys have not provided much historical information on the resources.

Of the sixty-seven resources studied, twenty-eight are found to be under pressure and thirty-two are under pressure with potential threats. These sixty resources are under pressure due to their zoning designation alone. Two other resources are potentially threatened only and five are neither under pressure or threatened.

Resources of particular concern include those along Ustick Road. Also the resources immediately south of Ustick Road along Mumbarto street add to the historic character of the Ustick area. Though these resources are widely dispersed and may not be cohesive enough for an historic district, the area is worthy of a more intensive level of study and further documentation perhaps through oral histories. Urban expansion is occurring in the Ustick area at a rapid pace and these resources are in jeopardy. Will the historic character of this older community be consumed by residential subdivisions or will it remain and island of historic interest within the urban landscape?

Another area of concern is the archaeological site east-southeast of Table Rock. The Warm Springs Mesa residential development is moving north towards Table Rock. The archaeological evidence in this area is in danger of destruction if not by urban expansion, certainly by the increased use of the area by the residents. This area is crisscrossed with dirt roads accessible to off road vehicles, this in itself is a major threat.

A third area of concern is the route of the Oregon Trail along the bench south of the Boise River. Some of the trail has been subsumed by residential development. This resource is under pressure by future residential growth eastward along the bench.

How long will it be before the Historic Markers along Highway 21, depicting the wagon ruts of the Oregon Trail, is obsolete?

Stylistically, the areas surveyed include a variety of architectural resources. The predominant style found is the Bungalow; a common trend of residential building from the early 1900's - 1940. Seventeen resources of this style were surveyed. Eleven vernacular dwellings were located. Some had similar detailing, and materials which may refer to the usage of Pattern Books. Nine hip or pyramid roof style residences were located. One of each of the following were also found: Greek Revival, Gothic Revival, Queen Anne, Neo-Classical, and an English Cottage. Two brick commercial structures with interesting corbelled cornices are located along Ustick Road. The remaining resources include a variety of non-descript residences, a school and two agricultural sites.

The styles and characteristics of the agricultural buildings associated with farmstead residences were not surveyed in detail. Evaluating the styles of barns and outbuildings was beyond the scope of this project, but would create an interesting future survey topic.

Scattered resources in all three survey areas provide information about the settlement of the Boise Valley. Vernacular styles of buildings, materials used, and locations and clustering of farmstead buildings provide information about settlement patterns. The maps used in this study give indications of road and irrigation development and provide an initial step in studying these rural areas. Further
Many other areas included in the Boise Area of Impact are experiencing rapid urban growth due to the decline in agricultural land usage and rezoning of these parcels. A study such as this could be conducted in other locations as well. Conducting windshield or reconnaissance level surveys, however, does not create a data base of historic information beyond architectural style and resource type/usage. An intensive level survey will provide additional information concerning land ownership which in turn can give clues to the people that settled here and used the land. Ethnic groups may also be defined and building types and styles may be connected to these ethnic groups. Occupations may be derived from a more intensive research endeavor. Thus, contractors may be identified who lived in the area and perhaps were involved in local construction projects. Patterns of land use and the rate of urban expansion would also become evident with a more intensive level survey. A formal documentation of one of the farmsteads through Historic American Building Survey standards may be an option for preserving one of these farm sites.

The Consultant encourages the Boise City and Ada County Planning Staff to continue surveying these resources on a windshield level. (There are three abandoned resources within this survey that are probably doomed due to rezoning. A windshield survey will at least document their land use for future study.) As funding allows, more intensive level study could be spent to build upon previous survey endeavors.
Survey Ranking

خفض الطلب: شريطة إعطاء تقييم للهيكل التفصيلي لكل الممتلكات والمنحزات القريبة من الممتلكات الضائعة التي تضغط على المورد. الأهمية في الهيكل التفصيلي كالتالي:
- AP-2: الحفاظ على الزراعة حتى تتوفر الخدمات السكنية.
- R1, R3, or R8: تطوير سكني مع عدد من الإدارات في المزرعة.
- C-1, C-2: تطوير سكني أو تطوير تجاري.

28 مورد

خطر المحتمل: أغلب الأثر الذي يمكن أن يؤثر سلبياً على المورد.
- زيادة السرعة على الطرق.
- أثر سكني محظور تجاري وحيد.
- موقع أثري معرض للخطر بسبب التخريب الزائد بسبب الاستخدام الكثيف للموقع.

2 مورد

خفض الطلب مع خطر محتمل: أغلب الأثر الذي يؤدي إلى التأثير المضاعف على المورد.

32 مورد

خطأ ضعيف: المورد المهم للمنطقة المستهدفة، ولكن يمثل مورد محظور بفضل الممتلكات الأخرى ولا يوجد أي تهديد محتمل.

5 مورد

Prioritized List

Resources were placed on this prioritized list because of stylistic importance, potential historical importance (The Ustick Community), degree of potential threats upon the site, or the need for further documentation. Resources followed by an * are strongly recommended for further documentation and research. Resources followed by a # indicate a previously inventoried site.

Date of Inventory Completion: April 1992
1. Inventory # 027
2. Historic and/or common name (if known) 
3. Address of resource 3976 Cloverdale Road
4. Township Survey Data
   NW 1/4 of NW 1/4 of SW 1/4 of Section 34 T4N R1E Boise-Meridian
5. Use/type classification Domestic/Agricultural c. 1910
6. General Architectural description 2 story wood frame Gothic Style farmhouse. Gable roof with intersecting north wing. Horizontal lap siding. Decorative shingles in front gable. Front porch is enclosed. 1/1 double hung windows. Outbuildings include a gambrel roof barn, 1 gable roof shed, 1 saltbox roof shed, 1 gable roof garage, 1 gable roof wellhouse.

7. Condition of Resource Excellent
8. National Register status (estimation) Eligible
9. Comments (including degree of development pressure and type on resource) This site is surrounded by residential development. The only other impact would be the widening of Cloverdale Road. See Ada County Farmstead Survey 012444-50 for more information. Under pressure with potential threat. Zoned R1 for residence and R8 for agricultural buildings.

4. Township Survey Data
   NE 1/4 of NW 1/4 of SE 1/4 of Section 24 T4N R1E Boise-Meridian
5. Use/type classification Domestic/Agricultural
6. General Architectural description 1 1/2 story wood frame with gable roof
   with eave returns and one story gable wing to the south. Rustic siding.
   Gable hood over entry. Windows are boarded over. One story wood frame
   addition to the rear. Also cast concrete block/brick rear addition.
   Outbuildings: 1 story concrete block garage with gable roof, 4-5 wood
   frame sheds to the south and southwest of the residence.

7. Condition of Resource Deteriorated - abandoned
8. National Register status (estimation) not eligible
9. Comments (including degree of development pressure and type on re-
   source). This site is surrounded by pasture on the south, north, and
   west. Residential development has occurred to the east across Gary
   Lane. Further residential development or commercial development will
   impact this site. Under pressure with potential threat. Zoned R1.
