

Ada County Solid Waste Education Center Remodel Design

Redesign the existing Solid Waste Admin Building located at 10300 N Seamans Gulch Rd, Boise, Idaho to accommodate new Education facility which would include, but not be limited to: demo existing facility, design new interior space, design of MEP requirement, design exterior space (site) to accommodate education facility needs. Landscaping and storm water runoff collection and retainage plans, and designs associated with the project designs must be included. As part of the project, County desires assistance in evaluating the phasing and implementation of construction. County anticipates the project will be implemented in two phases. Phase One is to consult with County to create a design concept and create a set of construction documents and an estimated cost of the entire project which will be presented to the Ada County Board of Commissioners ("Board") during the county budget appropriation process. Should the budget be approved by the Board the project would move to Phase Two – the actual construction of the project including bidding and Consultant construction oversight.

HIGHLIGHTS

Location: Ada County Landfill
Architect: TBD
General Contractor:
Completion: Summer 2023
Project Budget: **TBD**
